

Question 5

5.1

<u>Name of student being evaluated:</u>		SANDISIWE MANYATHI ST1050038 (GL)		
		Seldom	Frequently	Always
<u>The student's personal work:</u>		0	1	2
1	The student contributed good ideas that added value to the project and produced high quality work.			2
2	The student performed their tasks in line with what was expected of them.			2
3	The student managed their own time well and met deadlines.			2
<u>The student's work as part of a team:</u>				
4	The student accepted responsibility for a fair portion of the tasks and was an enthusiastic member of my team.			2
5	The student helped others to be successful and worked well with other members of the team.			2
Weighting				10/2
<u>Total</u>		/5		

<u>Name of student being evaluated:</u>		NOMCEBO ZULU ST10452658		
		Seldom	Frequently	Always
<u>The student's personal work:</u>		0	1	2
1	The student contributed good ideas that added value to the project and produced high quality work.			2
2	The student performed their tasks in line with what was expected of them.			2
3	The student managed their own time well and met deadlines.			2
<u>The student's work as part of a team:</u>				
4	The student accepted responsibility for a fair portion of the tasks and was an enthusiastic member of my team.			2
5	The student helped others to be successful and worked well with other members of the team.			2
Weighting				10/2
<u>Total</u>		/5		

<u>Name of student being evaluated:</u>		LUVUYO YIZANI ST10442920		
		Seldom	Frequently	Always
<u>The student's personal work:</u>		0	1	2
1	The student contributed good ideas that added value to the project and produced high quality work.			2
2	The student performed their tasks in line with what was expected of them.			2
3	The student managed their own time well and met deadlines.			2
<u>The student's work as part of a team:</u>				
4	The student accepted responsibility for a fair portion of the tasks and was an enthusiastic member of my team.			2
5	The student helped others to be successful and worked well with other members of the team.			2
Weighting				10/2
<u>Total</u>		/5		

5.2

Introduction

The CareConnect Health & Wellness initiative provides a mobile application which delivers emergency SOS services and mental health assistance and offline health directory features to improve community access to vital health resources.

The main goal of this assignment from a project management perspective required creating a plan to organize and supervise every step of application development and deployment but did not include actual coding work.

The project proved that organized project management systems require setting specific goals and measurable results and risk evaluation and timeline milestones and stakeholder management. The case study demonstrates the essential role of strategic planning and communication methods to reach digital health solution success which directly helps community members.

Skills Learnt

Technical Skills:

The entire project required me to use multiple essential project management tools and techniques. I generated the Gantt chart through ProjectLibre which helped me establish timelines and display how different project activities connected to each other. The Work Breakdown Structure (WBS) that I created enabled me to break down the project into manageable sections which helped me assign budgets and resources and define responsibilities for each team member.

I kept GitHub logs to track project issues and progress updates and task solutions which enabled better transparency and version control. I created a Network Diagram to display the order of tasks while determining the critical path and making sure all dependencies remained correctly aligned.

The tools helped me improve my skills for creating plans and scheduling work and monitoring project progress to meet planned deadlines.

Communication and Teamwork Skills:

The group assignment needed strong communication skills and teamwork because we are students who must practice project management principles in real-world situations. I worked together with my team members who held positions as Project Manager, Product Owner, Developer, UX Designer and Community Liaison to achieve all project milestones and deliverables.

Our team conducted regular brainstorming sessions to discover new project features and scheduling solutions and risk management approaches. Through the sessions we gained

knowledge from each other while learning about the process of making group choices in projects.

The team organized group discussions to assess our progress while defining individual duties and fixing problems that emerged during our work. Our team improved the WBS and project evaluation form and Gantt chart documents through feedback sessions which helped us achieve academic requirements and professional project management standards.

Through these interactions, I learned to communicate clearly, listen actively, and adapt my ideas based on constructive peer input. The experience improved my teamwork abilities and helped me gain self-assurance in group communication while teaching me to work with others in organized project environments as a student project manager.

Management Skills:

Through my role as a project manager I developed better time management skills and leadership abilities and decision-making competencies. I established task priorities based on the twelve-month schedule while maintaining resource management that stayed within the R1.75M project budget. I assessed the possible threats which emerged from framework dependencies and network limitations to create appropriate risk reduction plans. The experience taught me to handle time and cost and scope requirements while delivering outstanding project results.

Role in the Team

I handled the responsibility of managing all project planning elements and team coordination and communication duties. The project evaluation form and budget summary and scope statement documents received my approval because they met all organizational standards and stakeholder requirements. The workflow organization became possible through my efforts to define clear milestones and track progress using ProjectLibre and GitHub. The team reached solutions for scheduling conflicts and project ownership problems through my leadership of discussions which promoted teamwork. My leadership skills and organizational abilities and team management expertise became stronger through this experience which helped me keep the team focused on meeting the project plan deadline.

Research and Technology

My investigation focused on studying different project management systems to determine which tools work best for scheduling and record keeping. I examined how Flutter and other cross-platform development frameworks operate to determine their effects on project objectives and delivery speed.

The project required me to handle its completion through various technological resources which I used in my work.

ProjectLibre functions as a tool which enables users to build Gantt charts while monitoring their project milestones.

GitHub functions as a platform which enables users to document issues and project logs and share project development progress.

Microsoft Excel and Word serve as the tools I use to create budget documents and compile reports and track project progress.

Network Diagram tools enable users to build visual displays which demonstrate project dependencies and identify critical path elements.

Work Breakdown Structure (WBS) – for breaking the project into smaller tasks, assigning roles, estimating costs, and tracking progress.

The research findings along with my fieldwork experience showed me how digital resources help teams follow project plans while maintaining communication with all involved parties.

Personal Strengths and Weaknesses

Strengths

During this group project, I discovered several personal strengths that contributed positively to my performance and the team's overall success:

Strong Organizational Skills:

My abilities in task planning and organization proved to be excellent. The combination of ProjectLibre with Work Breakdown Structure (WBS) tools allowed me to create logical activity plans which resulted in realistic timelines and effective progress tracking.

Effective Communication:

I was able to communicate clearly with my teammates, both in meetings and through digital platforms. My ability to listen actively and provide constructive feedback helped maintain a positive and productive group dynamic.

Team Collaboration:

I contributed actively during brainstorming sessions and feedback discussions, ensuring that all team members' ideas were considered. The project plan received my support because I helped team members understand their specific tasks and responsibilities.

Dependability and Accountability:

I consistently met deadlines and ensured that my assigned tasks, such as updating GitHub logs and contributing to the project documentation, were completed accurately and on time. This reliability helped build trust among my peers.

Analytical and Problem-Solving Skills:

I demonstrated strong analytical thinking by identifying potential risks and developing mitigation strategies. For example, I helped evaluate issues such as framework dependencies and proposed contingency actions to

Weaknesses and Areas for Improvement

Time Management under Pressure:

Handling various deadlines for distinct modules together with project responsibilities proved to be a difficult task. I did not accurately predict the duration of specific tasks including report preparation and Gantt chart formatting. The Gantt chart took more time than I expected. The report preparation process also required more time than I anticipated.

Improvement Strategy: I plan to use more detailed weekly schedules and time-tracking tools to better estimate workload and allocate time more realistically.

Delegation and Assertiveness:

The need to maintain control made me reluctant to delegate tasks or challenge student work because I feared being seen as too controlling. The assignment generated ambiguous lines of responsibility between staff members. **Improvement Strategy:** I aim to develop more confidence in asserting leadership decisions respectfully and ensuring that all members have clearly defined tasks.

Balancing Detail with Brevity:

The documentation process led me to produce excessive details which extended report lengths beyond what was necessary.

Improvement Strategy: I will focus on summarizing key information more concisely while maintaining clarity and professionalism in documentation.

Group Dynamics Management:

The process of handling diverse viewpoints from students in a group became difficult when their ideas and work rates differed substantially.

Improvement Strategy: I will continue improving my conflict-resolution and facilitation skills to keep discussions constructive and ensure that all voices are heard equally.

Stakeholder Relationships

Throughout this group project, maintaining positive relationships with team members and stakeholders was essential for ensuring coordination and achieving project objectives.

Aspects That Worked Well:

Students learned how to function within a structured project team through their educational experiences which required them to perform specific roles including Project Manager and Product Owner and Developer and UX Designer and Community Liaison. Our team achieved great results through our successful collaboration because we valued each team member's input and joined forces during meetings and provided assistance to each other for reaching

our project goals. The team members achieved deadline and academic requirement compliance through their regular communication via shared documents and online chats and feedback sessions.

I also maintained good interaction with the academic stakeholders (lecturer and assessor) by following submission guidelines carefully and ensuring that all project components such as the WBS, Gantt chart, and evaluation form met required standards.

Areas for Improvement:

At times, communication gaps occurred when multiple members worked on the same section simultaneously, leading to overlapping content or minor inconsistencies. The project manager in training discovered that creating specific task assignments together with scheduled progress evaluations would boost responsibility and stop work duplication.

To strengthen future stakeholder relationships, I plan to:

Establish more defined communication channels and meeting structures.

The team needs to give updates on a regular basis while they should track their modifications right after they take place.

Team members can establish trust with one another through the practice of active listening together with the display of genuine empathy.

The suggested improvements will help me establish better teamwork and build respectful relationships with all stakeholders throughout my future projects.

Impact

Value Added to the Project:

My main contribution to the team was ensuring structure, organization, and progress tracking throughout the project. I created and managed documents such as the Work Breakdown Structure (WBS), Gantt Chart, and Network Diagram, which helped visualize project tasks, dependencies, and timelines. The documentation I maintained on GitHub allowed team members to track progress transparently through its detailed update records. My project management skills helped me complete all deliverables on schedule and achieve every project milestone. The brainstorming feedback I received helped me improve our final documents which resulted in better professional quality for our submission.

Creating a Greater Impact:

The way I lead group discussions needs improvement to create a better lasting impact because I need to establish clear leadership methods while making sure every participant stays active during the entire project duration. I plan to discover additional project management tools which will help my team work together better while making sure our work remains accountable. The next projects I will work on will concentrate on peer mentoring and motivation while creating an environment of inclusion that shows appreciation for every team member's work. The team would become more united which would result in better project results.

Conclusion

Through the CareConnect Health & Wellness project, I honed my project management skills in a team environment, applying risk management, scheduling, budgeting, and stakeholder communication. I learned that successful project completion hinges on clear communication, teamwork, and detailed planning. My training with ProjectLibre, GitHub, and WBS tools improved my organizational efficiency. The experience highlighted that technical skills alone are insufficient; interpersonal abilities such as empathy, leadership, and adaptability are crucial. I plan to leverage these insights in future academic and professional projects to enhance my project management effectiveness.
